COURIER MANAGEMENT SYSTEM

1. BRAINSTORMING & IDEATION

1.1 Problem Identification

Traditional courier management often depends on handwritten records, paper forms and separate files. This can result in incorrect or missing customer details, difficulty tracking shipments, delayed updates and difficulty preparing reports. The project identifies the need for a centralized digital system that can organize customer, courier, shipment and delivery information.

1.2 Problem Statements

ID	Target User	Problem Statement
PS-1	Customer	The customer wants to book and track a courier, but manual processes can make shipment information difficult to access and track.
PS-2	Courier Staff	The courier staff wants to manage shipment and delivery details, but scattered records can cause delays and errors.
PS-3	Delivery Manager	The Delivery Manager wants to monitor shipment status and deliveries, but manual tracking can make it difficult to get updated information.
PS-4	System Administrator	The System Administrator wants to manage users and courier records, but manual access control can create risks of unauthorized access.

1.3 Target Users

- Customer
- Courier Staff

- Delivery agent
- System Administrators

1.4 Empathy Map

Empathy Area	CMS Understanding
Think & Feel	Users need accurate, updated and easily accessible courier and shipment information.
Hear	Users receive shipment-related information and delivery updates from courier staff.
See	Users currently see booking records, paper forms and manually maintained shipment details.
Say & Do	Users enter, check and maintain courier and delivery information manually
Pain	Data-entry errors, missing records, delayed updates and difficu Difficulty tracking shipments
Gain	Automation, centralized information, faster tracking and improved shipment visibility.

1.5 User Needs

- Simple courier booking and record maintenance.
- Accurate customer and shipment information.
- Easy tracking of courier status.
- Controlled access for different user roles.
- Reports for monitoring courier activities.
- Updated shipment information for customers.

1.6 Pain Points

- Manual paperwork and repeated data entry.
- Risk of incorrect or missing Courier records.
- Scattered information and scattered across different files .
- Delayed status updation
- Difficulty preparing reports
- Limited visibility into shipment status

1.7 Selected Idea

The selected idea is a Courier Management System that centralizes customer, courier, shipment and delivery information in a digital platform. The system provides structured data management, shipment tracking, status updates, access control and reports.

1.8 Objective of the Idea

The objective is to develop a centralized and user-friendly courier management solution that reduces manual work, improves data accuracy, supports controlled access, enables faster shipment tracking and provides useful courier-related reports.

1.9 Expected Outcome

The proposed system is expected to provide organized digital courier records, better data accuracy, faster shipment tracking, improved delivery monitoring and a reliable foundation for future courier service automation.
