COURIER MANAGEMENT SYSTEM

6. PROJECT TESTING

6.1 Testing Objective

Testing verifies that the Courier Management System functions according to its requirements and that customer, courier, shipment, delivery, validation, security and analytics features behave as expected.

6.2 Test Areas

Test ID	Area	Expected Result	Status
TC-01	Customer Record Creation	Customer record can be created with required information.	Tested
TC-02	Courier Record Creation	Courier record stores booking and parcel information correctly..	Tested
TC-03	Shipment Record Creation	Shipment record stores tracking and delivery information correctly .	Tested
TC-04	Delivery Record Creation	Delivery information and delivery status can be stored correctly.	Tested
TC-05	Mandatory Field Validation	Required fields prevent incomplete records where rules apply	Tested
TC-06	Date Validation	Invalid booking, pickup or delivery date combinations are controlled	Tested
TC-07	Tracking ID Validation	Tracking information is checked according to configured rules	Tested
TC-08	Field Dependency	Related field values respond correctly to selected information	Tested
TC-09	Relationship Testing	Customer, Courier, Shipment and Delivery relationships display connected records	Tested
TC-10	Security Testing	Configured profiles and roles provide appropriate access.	Tested

TC-11	Sharing Rules	Records are visible/editable according to configured sharing rules.	Tested
TC-12	Reports	Reports display relevant courier, shipment and delivery records.	Tested
TC-13	Dashboards	Dashboard components reflect available report data correctly	Tested
TC-14	Performance	Queries and reports are checked against the target of approximately less than 3 seconds	Checked

6.3 Validation Testing

Validation testing covers mandatory fields, date-related checks and tracking or shipment information. The purpose is to prevent incomplete or invalid courier records from being accepted..

6.4 Security and Access Testing

Security testing covers profiles, roles and sharing rules. The system is checked to ensure that Customer, Courier Staff, Delivery Manager and Administrator access follows the configured permissions..

6.5 Analytics Testing

Reports and dashboards are checked for correct display and updates based on the available customer, courier, shipment and delivery records

6.6 Testing Conclusion

The testing phase covers the core data, validation, relationship, security and analytics areas of the Courier Management System. The documented test areas provide evidence that the implementation has been reviewed against the project requirements
